Getting Started!

Overview

This Magento extension allows site owners to use pricing in Centi-meters, Meters, Milli-meters, Inches and Feet on their store and apply rule based discounts on products based on their sizes. Just create custom options for each product that are required e.g. Length, Width, height etc. (Visit Demo to view how). These options will then appear on product pages where customers will be able to enter values from within the defined by Admin in Price Calculator tab (created by this extension in product options). If the values entered are not correct, an error message is shown which can also be customized.

How it Works:

Price Calculator Magento extension will automatically create a “Price Calculator” tab for each product. In this tab price rules are manually defined such as below,

1. min=10;max=45;discount=10,50;size=15,30;area;percent;
2. min=20;max=65;discount=15,70;size=15,30;volume;fixed;

Above rules show minimum and maximum sizes for the product, according to these rules the discount amount will be 10% for the sizes above 15 square meters and 50% for the sizes above 30 square meters. You can select Area or volume as product dimension and choose fixed values or in percentage. Admin can change these values according to the requirements. Also from this tab admin can select the input and output unit types like as below,

1. Centi-meter
2. Milli-meter
3. Foot
4. Inch
5. Meter

When customers will increase or decrease the value of any attribute such as the Length or Width, price will automatically increase or decrease accordingly. Price of single unit (per unit area) is set from “Price Calculator” tab. Suppose the base price of product is $100 and two custom options are created, Length and Height, then if customer enters 5 in Length and 3 in Height, this module

will multiply 5 and 3 resulting in 15. Let us suppose also that we have set “10” as per unit price then this extension will add “10 * 15” = $150 in the base price. So now our price will be $250. Important point is that the discount is applied on $150 not on $250. Once the size is over 15% then 10% discount will be applied as per the first rule. For invalid values an error messages will be shown.

Features

Pricing Calculator Configuration Features:

- You can configure custom error messages
- Keywords for minimum and maximum size that will appear in Product’s Price Calculator rule tab
- Custom Text for discount Label
- Custom attributes on which Price Calculator rules will be applied such as Length, Width, Height etc.
- Enable/Disable extension

General Features

- Product Price is dynamically updated based on input values
- Multiple Input and output types are supported such as Meter, Centi-meter, Milli-meter, Inch etc.
- Length, area and volume calculations
- Decimal and Integer input values are supported
- Creates Price Calculator Tab for each product in which Price rules can be defined and discounts can be applied on products based on their sizes
- Set minimum and maximum required dimensions in price rules
- Custom Validation messages
- Supports group pricing
- Cross Browser compatible
- Meets highest programming standards

Installation

Step by Step

It is highly recommended to backup your server files and database before installing this module. No responsibility can be taken for any adverse effects it may cause. It is also recommended that you install it on a test server initially to carry out your own testing.

3. Extract the zip file FME_Pricing_Calc_Ext_1.0.zip to a local folder.

4. Copy the file FME_Pricing_Calc_Ext_1.0/app/etc/modules/FME_Pricecalcultor.xml TO /app/etc/modules.

5. Copy the full folder FME_PriceCalculator/app/code/local/FME/Pricecalcultor TO /app/code/local/FME.

6. copy the file FME_PriceCalculator/app/design/frontend/default/default/layout/pricecalcultor.xml TO /app/design/frontend/default/default/layout/.

7. Copy the full folder FME_pricecalcultor/app/design/frontend/default/default/template/pricecalculto r TO /app/design/frontend/default/default/template.

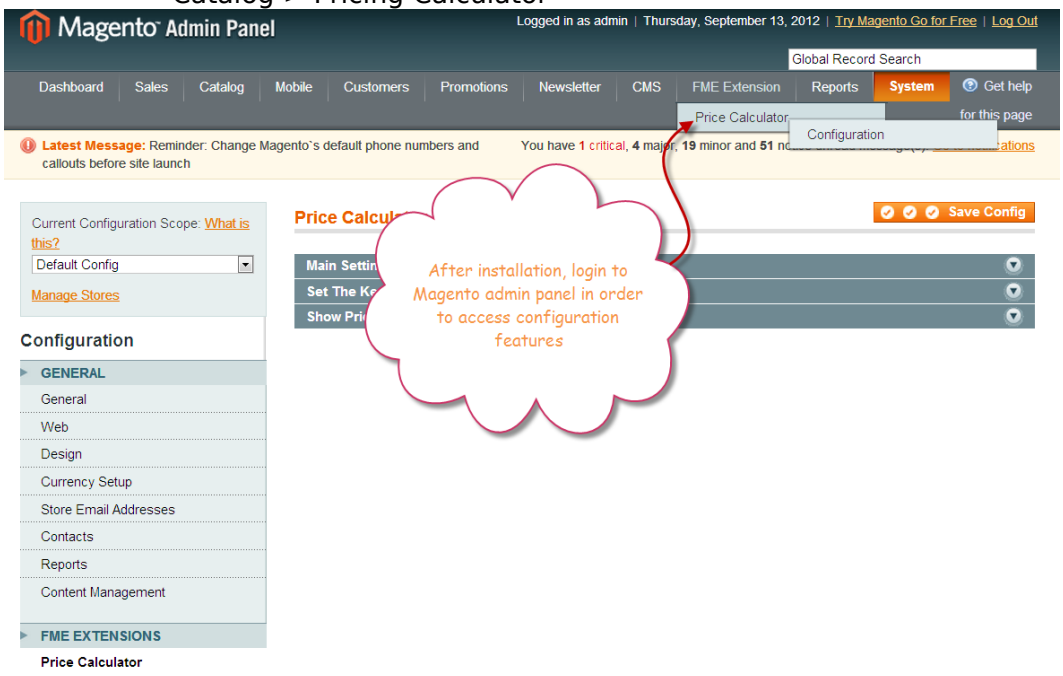
8. copy the file FME_PriceCalculator/app/code/core/mage/catalog/model/product/type/price.ph p TO /app/code/core/mage/catalog/model/product/type/. Please before copy the file take the backup of your current file.

9. Delete cache from admin panel or delete that from file system /var/cache

10. Logout from the admin panel and login back to see under the FME Extensions Menu in top navigation.

After Installation

After successful installation login to your store admin panel and go to Catalog > Pricing Calculator



Please read the user manual for more details on how to use this extension.

Disclaimer

It is highly recommended to backup your server files and database before installing this module.

No responsibility will be taken for any adverse effects installation or advice may cause.

It is recommended you install on a test server initially to carry out your own testing.

Support

You can also find Step by Step guide on this extension by visiting Pricing Calculator product page on FME's website. If you need more information or have any questions or problems, please refer to our support section:

If you have any questions or problems, please refer to our support section: http://support.fmeextensions.com where you will be able to log a Ticket and support will be provided.

If this does not provide the support you require or you are still struggling with your extension, submit a request via support@fmeextensions.com
