PRODUCT GRID CATEGORY FILTER

USER GUIDE

Version 1.0.0

1. About Extension

Magento 2 Product Grid Category Filter extension enables you to add a category search attribute to the product grid filters. With this category filter, Admin can filter products for a particular category in the product grid from the backend. The extension also allows adding category columns in the product grid.

2. Feature List

- Expand Product Grid with Category column
- Filter product collection by an individual or multiple categories
- Display Category full path or short path
- Allow direct access to a category edit page with clickable category name
- Update category of products from Mass actions
- Unlink old categories while assigning new categories to product

2.1 Expand Product Grid With category FIlter

This extension adds an **additional Category column** to the **Product grid** that features all the categories assigned to the product.

2.2 Filter Products by Individual or Multiple Categories

With this extension, Admin can easily filter products by individual or multiple categories. Admin can select multiple categories while filtering the products.

2.3 Display Category Full Path or Short Path

Admin can display Category full path or short path in the category column at the product grid. For example if admin **filters only Bags category** then you have the option to **display full path like Gear/Bags** or **short path like Bags.**

2.4 **Allow Direct Access to a Category Edit Page with Clickable Category Name**

In the **Category column** at the **product grid,** all the **category names** are **clickable** and the admin can **quickly open** the **category edit page** just by **clicking t**he desired category name.

2.5 Assign New Categories to Products From Mass Actions

With this extension, you can quickly assign new categories to any product.

2.6 Unlink Old Categories While Assigning New Categories to Product

With this extension, admin can **Unlink Old Categories** in a single click. Unlink all old categories assigned to a product and assign new categories.

3. **Setup the Extension**

Configurations:

At the backend, go to **FME EXTENSIONS > Configurations**.
Here you can find the following settings:

General Configurations:

- Expand the **General Configuration Tab**
- **Enable Module:** Select '**Yes'** or '**No**' to Enable/Disable the module

Show Category Path:

You can display the category path in the category column at the product grid.
Like if filtered category is **Bags (***Gear > Bags***)** then it will be displayed as shown below:
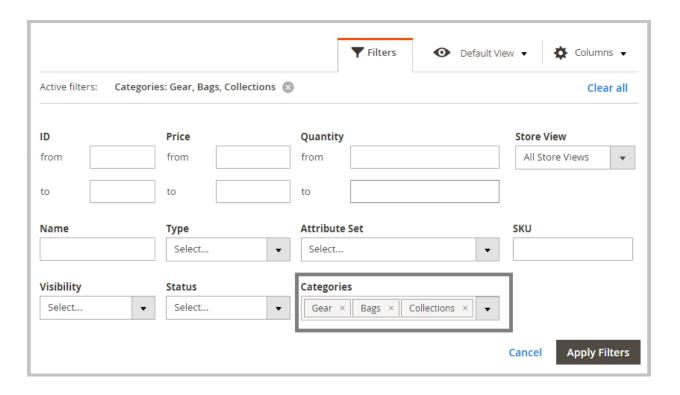

- **Category Full Path:** Display full path *(including parent & child categories)* like **Gear/Bags**
- **Category Short Path:** Display short path *(child category only)* like **Bags**

FME Extensions

General

Show Category Path [store view]	Full Category Path ▾
	Full Category Path
	Short Category Path

Category Filter:

Now Open **Catalog > Products**
In **Product Grid** Click **Filter button** on right top
Now in **Category Filter** choose your desired **category(s)** and click the **Apply Filters** button.

Products from the **filtered category(s)** will be displayed in the **Product grid** including the **Category column.**
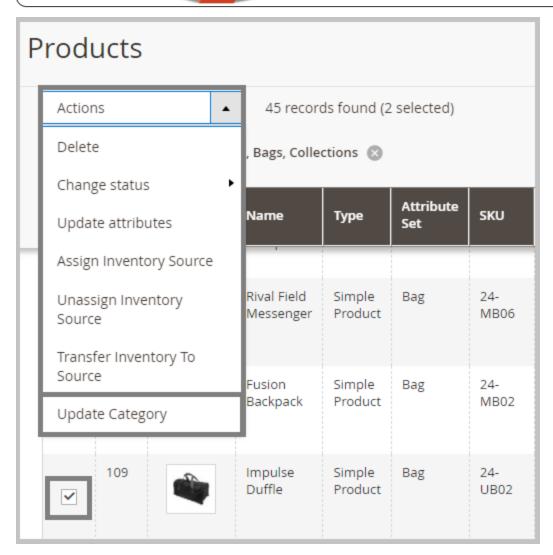

4

Access & Edit Any Category Page From Product Grid:

The **categories paths** shown in the **Category column** are **clickable** which allows the admin to **quickly edit the category page**. By clicking the **Category name** in the **Category column** as shown in above image, the category will be opened in **editor mode,** where you can update the category information.

Assign New Categories and Unlink Old Categories from Mass Actions:

Admin can easily **update the product category** using the **Mass Actions.** For this, Select any of the **Products** from the **Product Grid** and from **Mass Actions dropdown** select **Update Category**

A new page will be opened where you can **assign new categories** to product.

Unlink Old Categories

With the Unlink Old Category option, you can unlink product from all previously assigned categories.
